1. Measure the width and depth of the sink.

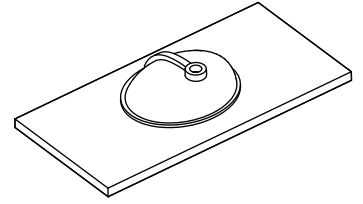

Ukur panjang dan lebar wastafel.

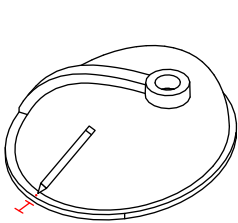

2. Calculate the outside cutout distance: (Sink's width/depth - Cut out's width/depth) $\div$ 2
Hitung jarak dari lubang potongan ke sisi luar: (panjang wastafel/lebar wastafel - panjang lubang potongan/lebar lubang potongan) $\div$ 2

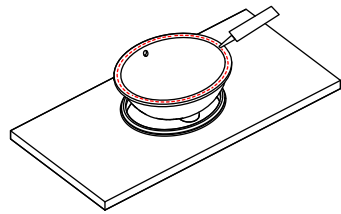

3. Find the centre of the sink overflow and mark the same point on the vanity top.
Tentukan titik tengah lubang overflow wastafel dan tandai titik yang sama pada top vanity.

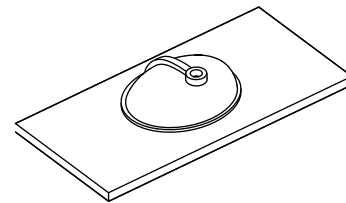

4. Align the overflow mark with the centre mark on the vanity top.
Sejajarkan tanda overflow dengan tanda tengah pada top vanity.

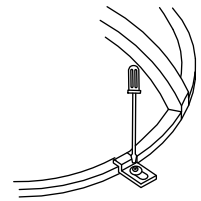

5. Mark the sink position on the remaining three sides. Then carefully remove the sink.
Tandai posisi wastafel pada tiga sisi lainnya. Kemudian angkat wastafel dengan hati-hati.

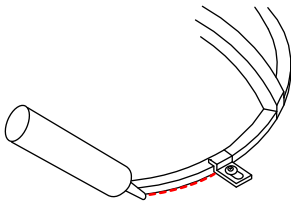

6. Apply a continuous bead of silicone into the groove of the sink.
Aplikasikan silikon secara merata pada alur di bagian wastafel.

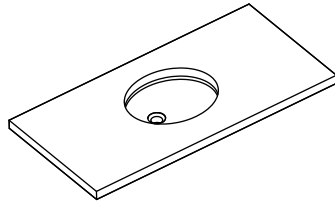

7. Carefully place the sink onto the vanity top and align it with the marks.
Letakkan wastafel dengan hati-hati pada top vanity dan sejajarkan dengan tanda yang telah dibuat.

8. Use brackets to secure the sink. Screw the brackets and tighten it. But do not overtighten.
Gunakan bracket untuk mengencangkan wastafel. Pasang sekrup bracket dan kencangkan. Tetapi jangan terlalu kencang.

9. Apply another bead of silicone around the edge of the sink where it meets the vanity top.
Aplikasikan silikon di sekeliling tepi wastafel pada bagian yang bertemu dengan top vanity.

10. Attach the vanity top to the vanity.
Pasang top vanity pada kabinet vanity.
